**IN-SITU CONCRETE**

**PINE**

A pale coloured timber with wide distinguishable growth rings. Not Naturally durable so it requires regular oiling or staining.

**KWILA**

A dark red hardwood, which will age to driftwood grey if left to weather. The texture is moderately coarse with a straight even grain. Dries slowly with a low shrinkage factor. Be aware of leeching for the first few months which can stain surrounding surfaces.

**VITEX**

Vitex is a very durable hardwood with a pale yellowish to creamy-grey appearance. The grain can vary providing a natural look with a fine texture.

**KARAPA**

Garapa is a light yellow to honey-brown colour with a very fine texture. It is a very durable timber that resists rot and decay. The timber has a high silica content, is scratch resistant and does not bleed.

**MACROCARPA**

A light blonde-coloured softwood. The grain and course texture makes it suitable for rustic and coastal settings.

**MAHOGANY**

Colour can range from pinkish-red to orange-browns. Close, straight grain makes it resistant to splintering
